Sales Tracker Application

Business Requirements Document (BRD) / Software Requirements Specification (SRS)

Consolidated requirements including functional specifications, administration, AI, collaboration, security, reporting, and wireframes.

Version: 1.0 | Date: October 13, 2026

1. Purpose and Scope

The Sales Tracker is a web and mobile sales-management application for Sales Managers, Recruiters, and Admins. It manages leads from initial prospecting through client conversion, records all interactions, integrates client email activity, supports collaboration and tasks, provides AI-assisted summaries and guidance, manages sales targets, and provides management reporting.

Technology: React frontend, Node.js backend, responsive web experience, Android and iPhone support, and Google Workspace/Gmail integration.

2. Roles and Permissions

Role	Core Permissions
Sales Manager	Create and own leads; update leads; add interactions, tasks, comments and voice notes; transfer lead ownership to another Sales Manager or Admin; collaborate; view personal targets, follow-ups and performance.
Recruiter	View leads and add new notes/comments. Recruiter access is otherwise read-only unless explicitly permitted by an Admin-controlled rule.
Admin	Full administrative and sales capabilities, including lead ownership, user administration, role display-name configuration, reporting, targets, queued-lead approval, archive management, dropdown/list management, device authorization, security configuration, and reassignment.

The application has three underlying system roles: Sales Manager, Recruiter, and Admin. Admin may rename the display name of any role from the Admin screen without changing the underlying permission model.

3. Authentication, Passwords and Device Security

- Only an email address pre-added by Admin to the user list with an assigned role may access the application.
- Supported sign-in methods: Google/Gmail authentication (OAuth 2.0) and email/password.
- Sales Managers, Recruiters, and Admins may change their own password. A Forgot Password workflow sends a secure reset link or code to the registered email address.
- Two-factor authentication (2FA) uses an OTP sent to the registered email address. Admin can enable/disable and configure 2FA individually for each account.
- Admin can configure automatic daily logout individually for each account. When enabled, the default configured logout time is 11:00 PM Eastern Time; the person must authenticate again afterward, including 2FA when enabled.
- Company-device restriction: Admin can authorize specific company phones and laptops for a Sales Manager or Recruiter and restrict login to those authorized devices.

- The system shall maintain device-identification information and login history. For native/mobile or managed-device deployments, a device identifier may be captured. For standard browsers, implementation must use a technically available managed-device/device-registration identifier rather than assuming a browser can directly read the physical MAC address.
- Admin has a Device Authorization screen showing registered/observed devices, assigned person, device type, first/last login, authorization status, and actions to authorize, revoke, or reassign a device.

4. Sales Manager Post-Login Action Center

After login, a Sales Manager is taken to an Action Center rather than directly to the general lead list.

- Top performance dashboard: Calls Made — This Week vs Last Week; Emails Sent — This Week vs Last Week; Visits Made — This Week vs Last Week.
- Below the dashboard: Yesterday's Follow-ups (overdue), Today's Follow-ups, and Tomorrow's Follow-ups.
- Each follow-up row should show Client Name, Status, latest/last BD Action, Follow-up Date, and owner. Clicking the row opens the complete lead.
- Yesterday's overdue items should be visually emphasized.
- Performance cards should support drill-down to the underlying activity list.

5. Left-Hand Navigation

A persistent left-hand navigation is required on desktop/tablet; mobile may use a collapsible drawer while preserving the same information architecture.

- Action Center / Home
- My Leads
- All Leads
- Cold
- Warm
- Hot
- Client
- Queued Leads
- Archive
- Lead Generation
- Tasks
- Road Visit Planner
- Dashboard / Reports
- Targets / Target Templates
- Admin / User Management (Admin only)
- List of Values (Admin only)
- Device Authorization (Admin only)

Lead views are sorted with the most recently active leads first unless another sort is selected. Archive has its own search and filters.

6. Lead Record and Data Fields

# / Field	Input	Requirement	Notes
1. Lead Type	Dropdown	Road Trip / Cold Call / Cold Email	

2. Sales Manager / Owner	System/User selector	Creator becomes owner; transferable to another Sales Manager or Admin	
3. First Contact Date	Date	MM/DD/YYYY	
4. Client Name	Text	Company/client name	
5. BD Action	Dropdown	Appendix B	
6. Client Response	Dropdown	Appendix B	
7. Status	Dropdown	Cold / Warm / Hot / Client	
8. Address	Text	Street/location address	
9. Comments	Text	General comments	
10. City	Dropdown	Appendix B; Admin-maintained	
11. Follow-up Date	Date	MM/DD/YYYY	
12. Client Executive	Text	Contact person	
13. Contact No.	Phone	Phone number	
14. Ext. / Alternate No.	Phone	Extension or alternate phone	
15. Contact Remark	Text	Contact-specific remarks	
16. Client Email	Email	One or more client contact emails may be supported	
17. Client Industry	Text/managed value	Industry	
18. Position(s)	Text	Open/target positions	
19. Contract Signed Date	Date	MM/DD/YYYY	
20. Interaction Notes	Rich text	Timestamped, attributed, newest first	
21. Lead Category	Dropdown	Skilled / Non-Skilled / Both	
22. Company Size	Dropdown	Large / Medium / Small	
23. Documents	Files	General lead documents	
24. Resumes / Profiles Shared	Files	Dedicated multiple-file field for profiles sent to client	

7. Lead Ownership, Transfer and Reassignment

- The Sales Manager who creates a lead becomes the lead owner.
- The owner may transfer ownership to another active Sales Manager or an Admin.
- Admin may reassign an individual lead or bulk-reassign selected leads from one owner to another.
- When an Admin terminates a Sales Manager, Admin must be able to assign that Sales Manager's leads to another Sales Manager, to himself/herself, or to another Admin.
- Ownership changes must be audit logged with previous owner, new owner, person making the change, date/time, and optional reason.
- Open tasks, follow-ups and reminders associated with ownership responsibility should be reassigned or explicitly reviewed during ownership transfer.

8. Lead Creation Date Control and Queued Leads

- A Sales Manager cannot directly create a lead with a First Contact Date earlier than yesterday.
- If such a historical date is entered, the lead is saved as a Queued Lead and requires Admin approval.
- Queued Leads appear in a dedicated navigation view for authorized users/Admin.
- Admin can approve or reject a queued lead; the decision and comments are audit logged.

9. Search, Filter and Archive

- Keyword search across lead data and searchable text anywhere in the lead except attachment file contents.

- Filters include at minimum Lead Type, Status, Lead Category, Company Size, City, owner/Sales Manager, Client Response, BD Action, First Contact Date range, Follow-up Date range, and Contract Signed Date.
- Search and filters apply to active lead views and Archive.
- Admin can select one or many leads from search/filter results and archive them in bulk.
- Archived leads remain available under left navigation → Archive with independent search/filter and can be restored by Admin.
- Search results should support sorting by most recent activity, first contact date, follow-up date, client name, and owner.

10. Interaction Notes and Voice-to-Text

- Interaction Notes support rich text formatting including bold, italics, lists, and links.
- Notes are stored as individual timeline entries with author and date/time and displayed newest first.
- Sales Managers and permitted Recruiters can add notes; historical notes remain attributable.
- Voice-to-text is available on computer, Android, and iPhone for creating interaction notes.
- Voice transcription should be editable before saving.
- Natural-language follow-up instructions inside notes may create tasks/reminders after confirmation.

11. Follow-up Interpretation, Tasks and Reminders

- Tasks can be created manually or directly from a lead, interaction note, email, or collaboration thread.
- Task fields include lead, title, description, assignee, due date/time, priority, status, checklist, creator, and timestamps.
- Examples: 'follow up tomorrow', 'follow up Monday', 'Feb/01/2026', 'next week', 'next month', 'January', or 'six months'.
- If only a month name is supplied, the reminder should default to the first working day of that month, subject to business-calendar configuration.
- Relative periods such as 'six months' should resolve from the source interaction date.
- Task updates notify assignees. Users can comment on tasks and use collaborative checklists.
- System should remind the responsible Sales Manager when a lead has had no action for one week, based on configurable action/status rules.
- Daily and weekly reminders are generated for pending/overdue activities.

12. Collaboration and Messaging

- Lead-specific threaded messages and comment threads.
- Mentions: @user (specific named person), @all, @admin, @recruiter, and @salesmanager.
- Mentions generate appropriate in-app, email, and/or mobile push notifications based on preferences.
- Reply, quote, and edit own messages; messages are timestamped and attributed.
- Rich text supports bold, italics, lists, and links.
- Messages cannot be hard-deleted by ordinary users; Admin may soft-delete while retaining audit history.
- Real-time updates without page reload, typing indicators, and presence indicators showing who is viewing the lead.
- Files can be referenced from messages, comments, and tasks.

13. Files, Attachments and Candidate Profiles

- Lead attachments support PDF, DOC/DOCX, XLS/XLSX, PPT/PPTX, images, and TXT.
- In-app preview is required so users can view supported attachments without downloading.
- Downloading remains available when permitted.
- Document version control is maintained for replaced/updated files.
- Dedicated Resumes / Profiles Shared area supports multiple candidate files and audit tracking.
- Optional AI summaries may be generated for documents and candidate profiles.

- Uploads can notify relevant collaborators.
- Admin can soft-delete files while retaining audit records.

14. Visiting Card Capture and OCR

- Sales Manager can upload a visiting/business card image or capture it from a phone camera.
- OCR extracts available name, company, title, phone, email, address and related fields.
- Extracted values are presented for review/correction before populating the lead.

15. Gmail / Google Workspace Email Integration

- The application links emails sent to and received from the Client Email address(es) to the corresponding lead.
- The owner's Sales Manager email account is the primary mailbox used to associate email exchanges with that lead.
- When lead ownership changes, future email association follows the new owner's connected/authorized mailbox while historical email records remain preserved.
- Lead Email tab shows threaded sent and received emails in chronological conversation view, including sender, recipients, subject, timestamp, body preview/body, and permitted attachments.
- Users should be able to reply/forward and attach files from within the application when permissions and Google Workspace authorization allow it.
- Emails may be used to create follow-up tasks/reminders.
- AI reads the complete available email thread for the lead and suggests a follow-up email based on conversation context.
- Each lead displays an Email Summary highlighting key discussions, commitments, questions, pending responses, dates, and suggested next actions.
- Each lead also displays an Interaction Summary covering notes, calls, visits, tasks, voice notes, collaboration, documents, and other recorded activity.
- Email and interaction summaries should refresh when new relevant information is added.

16. Lead Generation Module

- Sales Manager enters a company name and URL.
- Module provides company/industry overview, summary of open positions from available job sources such as Indeed and the company's careers/jobs page, potential hiring challenges for those roles, Glassdoor interview-summary information when lawfully/technically available, Google review summary, AI-suggested engagement approach, and AI-generated introduction email.
- Module suggests similar companies within a radius specified in kilometres.
- Road-visit candidates can be moved into the road planner or converted into lead records.
- Every generated-company/lead-generation result is saved to that Sales Manager's Lead Generation List with date and Sales Manager ID.
- Admin dashboard includes Lead Generation reporting for all Sales Managers and individual Sales Managers, with filters by person, date, company and other available scoring/metadata.

17. Road Visit Planner

- Sales Manager selects a date and enters/selects companies with company name, URL and address.
- System creates an optimized visit plan/route.
- Plan includes an approximately 30-minute lunch break around 1:30 PM.
- For each company, provide a brief company summary and available open-position information from Indeed and/or the company careers/jobs page.
- Visits performed feed Sales Manager activity and performance reporting.

18. Targets, Stages and Templates

- Admin can set Sales Manager targets for daily and weekly number of leads created.
- Admin can set minimum road visits required per day/week as configured.
- Admin can set monthly target for number of leads converted.
- Sales Managers have productivity stages: Onboarding, Training, and Full Productive.
- Each stage can have different target values.
- Targets can be assigned using reusable target templates. Admin can create additional templates.
- Each template stores the target numbers/thresholds and can be assigned to one or more Sales Managers.
- Target achievement is visible to Sales Manager and Admin and included in performance reports.

19. Sales Manager and Admin Dashboards

19.1 Sales Manager Dashboard

- Post-login cards for calls, emails and visits — This Week vs Last Week.
- Follow-up lists for yesterday, today and tomorrow.
- Personal target achievement, lead creation, conversions, outstanding tasks, and recent lead activity.
- Graphical views with drill-down to underlying leads/activities.

19.2 Admin Performance Dashboard

- Management summary for all Sales Managers.
- Click a Sales Manager name to open the individual's performance report.
- Periods: Today; Yesterday (business-day logic/excluding weekend where applicable); This Week; Last Week; This Month to Date; Last Month; Year to Date.
- Graphical interface with drill-down from charts/cards to the exact list of leads/activities behind each number.
- Admin can click a management lead summary item to open the entire lead.

19.3 Tool Engagement Report

- Admin can view tool-engagement reporting for all Sales Managers and for an individual Sales Manager.
- Metrics include logins, application usage/time where measurable, leads created, leads updated, leads converted, interactions recorded, tasks created/completed, voice notes, documents/resumes attached, and other tracked feature usage.
- Filters by date range, Sales Manager, role/stage, and target template where relevant.
- Graphical presentation with drill-down to supporting records.
- Reports may be exported to PDF/Excel.

20. Admin User Management

- Admin can add, invite, view, edit, deactivate/terminate, and manage Sales Manager, Recruiter, and Admin accounts.
- Admin pre-adds the person's email and role before that person can sign in.
- Admin can add another Admin.
- Admin can configure role display names.
- Admin can enable/configure 2FA and automatic 11:00 PM Eastern logout per account.
- Admin can manage authorized company devices per Sales Manager/Recruiter.
- Admin can terminate a Sales Manager. Terminated account loses login access but remains in historical audit records.
- Termination workflow prompts for lead reassignment to another Sales Manager, the terminating Admin, or another Admin; selective/bulk reassignment is supported.
- Admin can bulk assign/reassign leads from one owner to another.

21. Admin List-of-Values Management

- Admin can maintain the values used by all configurable dropdowns.
- Admin can add a new value, activate/deactivate a value, change display order, and edit permitted metadata.
- Admin can rename a selected value from an old value to a new value.
- Rename must update the displayed value consistently for existing lead records while preserving audit history of the original value/change.
- Deleting a value that is already used should be handled as deactivate/retire rather than destructive deletion unless a controlled migration is performed.
- Changes to list values are audit logged.

22. Notifications and Reports

- Notification channels: in-app, email, and mobile push for Android/iOS.
- Events include mentions, new comments/messages, task assignment/update, lead status change, file upload, follow-up reminders, queued-lead approval events, ownership transfer, and other configured events.
- Daily and weekly performance reports are delivered according to role and configured preferences.
- Daily and weekly reminders summarize due/overdue follow-ups and tasks.
- Notification preferences can be configured per account subject to mandatory Admin/security notifications.

23. Audit and Compliance

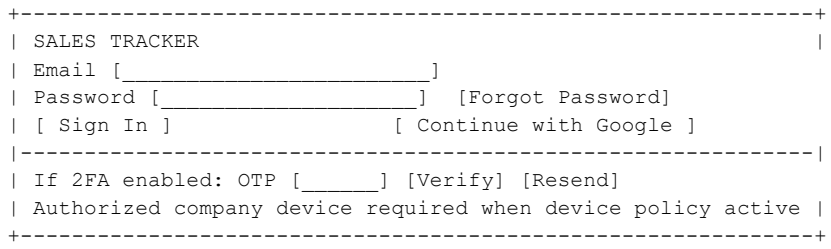

- Audit all lead creation and updates, including field-level changes where practical.
- Audit ownership transfer, assignment, archive/restore, queued-lead approval/rejection, user/role changes, device authorization, security configuration, list-value changes, messages/comments, tasks, documents, and profile uploads.
- Audit records include actor, timestamp, action, affected record, and before/after values where applicable.
- Interaction notes display author and date/time, newest first.
- Soft-deleted collaborative content remains represented in audit history.

24. Non-Functional Requirements

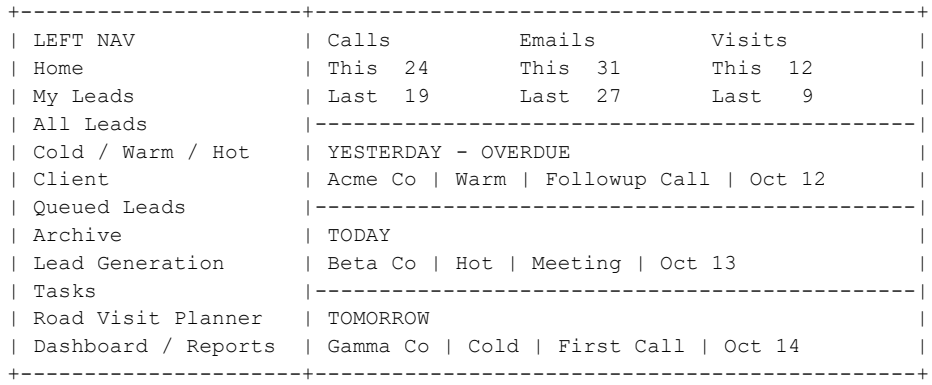

- Responsive, polished graphical interface optimized for lead work on desktop and mobile.
- Real-time collaboration for messages/comments/tasks where supported.
- Secure API and role-based authorization enforced server-side.
- Encryption in transit and appropriate encryption/protection for sensitive stored data.
- Scalable search/filter and activity timelines.
- Reliable audit logging and background notification processing.
- Accessibility-minded forms, keyboard navigation, labels, validation messages, and readable contrast.
- Integration implementations must comply with the APIs, permissions, terms and technical capabilities of Google Workspace and third-party data sources.

Appendix B — List of Values

All dropdown lists are Admin-maintainable. Admin can add, deactivate, reorder, or rename values while preserving audit history.

Lead Type
Road Trip, Cold Call, Cold Email

BD Action
First Call, First Email, First Meeting, Left Brochure, HR Contact Information Received, Introduction Email Sent, Email Followups, Followup Call, Waiting For Profiles from Recruitment, Shared Profiles, Followup on Profiles, Engagement / Ans Questions, In Person Meeting Scheduled, Virtual/Phone Meeting Scheduled, Contract Sent, Contract Clerification, Contract Followup, Contract Signed, New Position, Plan a Visit

Client Response
Approach Later, Engaged, Interested, Connected with HR, Not Interested, Do not use Agency, No Response, In Person Meeting Requested, Phone Call Requested, Left Voicemail, Got HR email, Not Hiring

Status
Cold, Warm, Hot, Client

Lead Category
Skilled, Non Skilled, Both

Company Size
Large, Medium, Small

Sales Manager Stage
Onboarding, Training, Full Productive

Roles
Sales Manager, Recruiter, Admin

City
Ajax, Alliston, Ancaster, Aurora, Balm Beach, Barrie, Beeton, Bowmanville, Brampton, Burlington, Caledon, Cambridge, Cobourg, Concord, Downsview, Downtown Toronto, Etobicoke, Georgetown, Glen Williams, Guelph, Hamilton, Kincardine, King City, Kitchener, Lindsay, Markham, Malton, Milton, Mississauga, Mount Forest, New Hamburg, Newmarket, North York, Oakville, Omemee, Oshawa, Peterborough, Pickering, Point Clark, Quinte West, Rexdale, Richmond Hill, Scarborough, Stoney Creek, Toronto, Trenton, Vaughan, Waterloo, Whitby, Yorkville, Belleville, Bloomfield, British Columbia, PEI, Quebec, Alberta, Manitoba, Prov, Prov, Prov, KINGSTON, HUNTSVILLE, Minesing, ON, Oro-Medonte,ON, Hillier, Port Colborne, Pefferlaw, Lincoln, Stouffville, Brantford, Bolton, Brockville, Ottawa, Innisfil, GTA, Queensville, London, Gormley, stratford, Troy, Erin, Hagersville, woodbridge, Halton Hills, Winnipeg, Markdale, St Catherines, East York, Thornhill

Appendix C — Key Business Rules

- Creator becomes lead owner.
- Owner may transfer lead to another Sales Manager or Admin.
- Owner Sales Manager email is used to associate client email exchanges.

- First Contact Date earlier than yesterday creates a Queued Lead requiring Admin approval.
- Keyword lead search covers all searchable lead data except attachment contents.
- Admin can archive one or many filtered/searched leads.
- 2FA and 11:00 PM Eastern auto-logout are configured per account by Admin.
- Authorized-company-device restriction can be configured by Admin.
- Admin can terminate a Sales Manager and reassign leads to another Sales Manager, self, or another Admin.
- All configurable dropdown values are Admin-maintainable and renamable with audit history.

25. Opportunity Recommendation

The Opportunity Recommendation module identifies potential sales opportunities from supported public job-listing channels, including Indeed as an initial source, and supports additional configurable channels over time.

25.1 Overview

- The Opportunity Recommendation module will automatically identify potential sales opportunities from publicly available job listings using supported and permitted source integrations.
- Indeed will be an initial/default channel, while the architecture will allow Admin to add and configure additional opportunity channels in the future.
- Sales Managers can create saved Opportunity Search Terms, receive automatically generated recommendations each morning, review opportunities, convert them to leads, mark them irrelevant, or run an on-demand search for similar opportunities.

25.2 Left-Hand Navigation

- Add Opportunity Recommendation as a dedicated item in the application's left-hand navigation.
- Sales Manager submenu: Dashboard, My Opportunities, Search Terms, New Opportunities, Converted to Leads, Irrelevant.
- Display a badge showing the number of new/unreviewed opportunities.

25.3 Opportunity Search Terms

- Sales Managers can create and manage multiple saved search queries.
- Each Search Term includes: Search Name, Keyword, Job Type, Location, Channel/Source, Created Date, Expiry Date, Status, Created By, Last Run Date, Next Run Date, Opportunities Found, and New Opportunities.
- Status values: Active, Paused, Inactive.
- Active searches participate in scheduled runs; Paused searches retain history but are skipped; expired searches can automatically become Inactive.

25.4 Multi-Channel Opportunity Sources

- Each Search Term can use one channel, multiple channels, or All Active Channels.
- Indeed is one supported source/channel, not a hard-coded dependency.
- Future sources may include company career pages, other job boards, public job feeds, approved third-party job APIs, and other Admin-configured sources.
- Adding a new supported source should primarily require a connector/configuration rather than changes to the core Opportunity, Search Term, Lead Conversion, reporting, or recommendation workflows.

25.5 Admin Channel Management

- Admin has an Opportunity Recommendation > Channels configuration screen.
- Admin can add, edit, activate, pause, deactivate, configure, and test a channel.
- Admin can control whether a channel is available to all Sales Managers or selected Sales Managers.
- Channel fields include Channel Name, Channel Type, Status, Connection/Configuration, Created Date, Created By, Last Successful Run, Last Error, Availability, and Execution Priority.
- Channel Type may include API, Public Job Feed, Career Page, or another supported integration method.

25.6 Daily Automated Opportunity Search

- A daily Cron Job runs every morning at an Admin-configurable time and time zone.
- For every Active Search Term, the system identifies its selected active channels and runs the Keyword, Job Type, and Location criteria.
- The system collects matching listings, normalizes them into a common Opportunity format, detects duplicates, compares them with previous results, stores new recommendations, and updates search-run statistics.
- A failure of one channel must not prevent other configured channels from completing.
- Each channel execution records success, partial success, or failure information.

25.7 Opportunity Record

- Each Opportunity stores available information including Company Name, Job Title, Job Type, Location, Job Posting Date, Job Description/Summary, Primary Channel, Source Name, Source Job ID, Original Job URL, Date Found, Search Term, Sales Manager, Opportunity Status, Matching Keyword, Last Checked Date, and other channels where the same opportunity was found.
- The application should identify whether the company already exists as a Lead, Client, another Opportunity, or a previously rejected/irrelevant Opportunity.

25.8 Opportunity Status

- Opportunity workflow statuses include New, Reviewed, Converted to Lead, and Irrelevant.
- New opportunities remain highlighted until reviewed by the Sales Manager.

25.9 Duplicate Detection

- Cross-channel duplicate detection should consider Source Job ID, Job URL, Company Name, Job Title, Location, Posting Date, and job-description similarity where appropriate.
- If the same opportunity appears on multiple channels, the application should normally show one Opportunity and list all sources where it was found.
- Previously converted, irrelevant, or reviewed opportunities should retain their status if rediscovered.

25.10 Daily Opportunity Report

- After the scheduled morning search completes, the system generates a Daily Opportunity Report for each Sales Manager.
- The report contains new opportunities only and groups them by Search Term, with source/channel information.
- The report includes per-channel result counts and the total number of unique new opportunities.
- Delivery channels include Email and In-App Notification, with Mobile Push where enabled.
- Admin can configure whether a No New Opportunities report is sent when no new recommendations are found.

25.11 Opportunity Dashboard

- Sales Manager dashboard summary cards include New Opportunities, Opportunities Found Today, Opportunities Found This Week, Converted to Leads, Irrelevant, and Active Search Terms.
- Results are grouped by Search Term with drill-down to the underlying Opportunity list.
- Dashboard filters should include Search Term, Channel, Status, Job Type, Location, date range, and keyword.

25.12 Convert Opportunity to Lead

- Sales Manager can select Convert to Lead from an Opportunity.
- The Add Lead screen is opened with available information pre-populated, such as Company Name, Location, City, Industry, Position(s), Company Size where available, source job information, and Opportunity reference.
- Sales Manager reviews and edits the information before saving.
- After creation, the Opportunity becomes Converted to Lead and links to the new Lead; the Lead retains a reference to the originating Opportunity and job listing.

25.13 Mark Opportunity as Irrelevant

- Sales Manager can mark an Opportunity as Irrelevant.
- The Opportunity is removed from active recommendations but retained in history.
- Optional irrelevant reasons include Existing Client, Existing Lead, Not Target Industry, Position Not Relevant, Company Not Suitable, Duplicate, Location Not Relevant, and Other.

25.14 Find Similar Opportunities

- Each Opportunity provides a Find Similar Opportunities action.
- The system performs an on-demand search across selected or all authorized active channels for similar listings from other companies.
- The search may prefill Job Title, Keywords, Job Type, Location, Radius, Industry where available, and Channels.
- Sales Manager can modify the criteria before running the search.
- Results can be converted to leads, marked irrelevant, opened at the source, saved as opportunities, or used to refine and rerun the search.

25.15 On-Demand Search

- Sales Manager can manually execute an existing Search Term using Run Search Now.
- Manual searches use the same configured Keyword, Job Type, Location, and Channels.
- Results are compared against existing Opportunities so previously discovered listings are not incorrectly presented as new.
- Manual execution is recorded in Search History.

25.16 Search History

- Each Search Term maintains execution history.
- History includes Run Date & Time, Run Type (Scheduled / On-Demand / Similar Opportunity), Channels, Number of Listings Found, Number of New Opportunities, Number of Duplicates, Execution Status, and Error Details where applicable.

25.17 Admin Configuration

- Admin can configure Daily Cron enabled/disabled, Cron execution time, time zone, Daily Opportunity Report, Email Report, In-App Notification, maximum automated searches per Sales Manager, search-expiry rules, duplicate-detection rules, retention rules, available Job Type values, and available Location values.
- The existing Admin List of Values functionality should manage configurable dropdown values where appropriate.

25.18 Channel Performance Reporting

- Admin can compare the effectiveness of each Opportunity Channel.
- Metrics include Opportunities Found, Unique Opportunities Found, New Opportunities, Opportunities Converted to Leads, Opportunities Marked Irrelevant, Conversion Rate, Searches Executed, Successful Searches, Failed Searches, and Last Successful Run.

25.19 Admin Opportunity Reporting

- Admin can report across all Sales Managers or an individual Sales Manager.
- Reporting dimensions include Opportunities Found, New Opportunities, Reviewed, Converted to Leads, Irrelevant, Conversion Rate, Active Search Terms, Search Terms by Sales Manager, Keyword, Job Type, Location, and Channel.
- Reports should support drill-down to the underlying Opportunity, Search Term, Sales Manager, or converted Lead.

25.20 Notifications

- Notifications include Daily Opportunity Report, New Opportunities, Search Term approaching expiry, Search Term expired, and Scheduled Search failure.
- Supported delivery methods include In-App, Email, and Mobile Push where enabled.

25.21 Audit Trail

- Audit Search Term creation/modification, status and expiry changes, scheduled runs, on-demand runs, similar-opportunity searches, Opportunity status changes, conversion to Lead, irrelevant classification, Channel changes, and Admin configuration changes.
- Audit entries include actor, date/time, action, previous value, and new value where applicable.

25.22 Source Access and Compliance

- Opportunity sources must be accessed through technically and legally permitted methods.
- The implementation must respect applicable source APIs, permissions, terms of service, robots/access restrictions, and data-use requirements.
- Source connectors should be isolated so a change to one source does not disrupt the rest of the Opportunity Recommendation module.

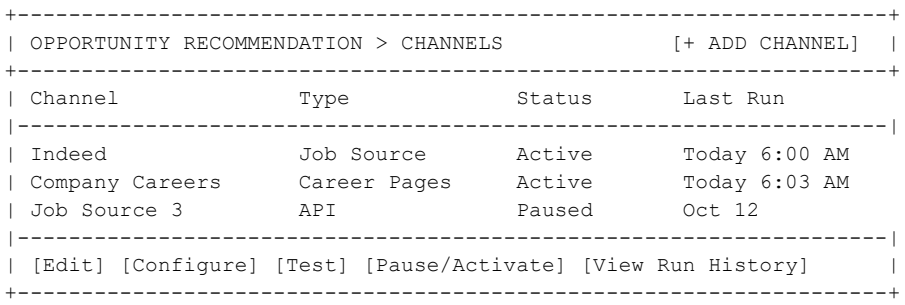

25.23 Example Search Term

Field	Example
Search Name	Maintenance Hiring – GTA
Keyword	Millwright
Job Type	Full-Time
Location	GTA
Channels	Indeed + Company Career Pages
Created Date	Oct. 14, 2026
Expiry Date	Dec. 31, 2026
Status	Active
